Positions

2021-present	Software Engineer, Deno
2020-2021	Consultant, th8ta Co-founded Verto, a decentralized exchange platform on Arweave.

Selected work

2026	Deno Desktop. Author of a desktop application runtime for Deno with native windows, webview and Chromium backends, and React-driven OS widgets.
2026	v8x. Author of a drop-in V8 ABI compatibility layer that runs <code>deno_core</code> unchanged on JavaScriptCore and QuickJS.
2026	Clawpatrol. A gateway firewall that inspects agent tool traffic and enforces policy before execution.
2024	Sui. Injects immutable payloads into ELF, PE, and Mach-O executables and powers <code>deno compile</code> .
2024	Turbocall. Generates V8 FFI call stubs at runtime without general-purpose libffi dispatch.
2023	op2. Author of Deno's Rust-to-JavaScript binding generator, including generated type conversions and V8 fast-call paths.

Talks
